---

In addition, this **company** is also a member of the UKGTN for the following:

<b>Wheat</b> - Falling Number
-------------------------------

The UK Grain Testing Network provides standardisation samples to align all Networked instruments with submasters immediately before harvest. The master calibrations are monitored during harvest and any necessary bias corrections made by the instrument manufacturers. This service, along with the regular Network ring checks, helps members to improve the reliability of NIR results. This service is a component part of good laboratory practice.

Issued on behalf of the UK Grain Testing Network:

Paul Allison, Proficiency Testing Schemes Manager, Sciantec, a division of Cawood Scientific Ltd.

Date of Issue: 20 June 2023
